Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martin et al (6,402,924) in view of Iio (4,353,333). Martin et al show a method of electrodepositing metal onto a substrate, which comprises applying a pulsed periodic reverse current (see abstract) and meets the requirements for the duration of times for the positive and reverse electric currents (see column 4, lines 28-35) as well as the very broad range claimed in claim 8 (see column 4, lines 28-40). This method is utilized for protective purposes, improving hardness and wear resistance (see column 2, lines 25-30). Martin et al show everything except utilizing the plating process in an inner surface of an aluminum cylinder having a suction port, exhaust port, and scavenging port. Iio teaches that it is old in the art to plate an aluminum cylinder having a suction port, exhaust port, and scavenging port. It would have been obvious to one having ordinary skill in the art to modify Martin et al by utilizing the plating method of Martin et al in the aluminum cylinder of a two cycle engine, in order to improve hardness and wear resistance of the cylinder.

Allowable Subject Matter

Claims 2, 3, 5, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
